MINIMA OF ECLIPSING VARIABLES

During February of 1977 the author observed the eclipsing binaries RZ Cas and W UMa photoelectrically with the 20-inch reflector at the Urals University Observatory. A yellow filter was used in the photometer. Visual times of minima have been observed with a binocular.

The heliocentric times of the observed minima determined by the chord bisection method are given in the table, along with the epoch number E, the O-C values and the number of estimates n.

The O-C values were computed using the elements :

$$\text{U Cep Min. hel JD} = 2407890^d.2957 + 2^d.4929005 \cdot E$$

RZ Cas Min. hel JD = 2417355.^d4233 + 1.^d1952519·E

W Uma Min. hel JD = 2421856.^d9401 + 0.^d333637665·E.
