PHOTOELECTRIC MINIMA OF ECLIPSING VARIABLES

The following Table I contains minima of the eclipsing variables V566 Oph and VW Cep obtained during the year 1978 at the Kryonerion Observatory, Greece. The observations were made with a 48-inch Cassegrain reflector (Contopoulos and Banos 1976) and a two beam multi-mode photometer (Goudis and Meaburn, 1973). The two intermediate pass-band filters used were selected to be in close accordance with the standard UBV colour system.

All the times of minima and the mean errors  $\sigma$  were calculated by the method of Kwee and Van Woerden.

The successive columns contain the name of the star, the heliocentric time of minimum, the mean error  $\sigma$ , the difference O-C, the filter used and remarks. The O-C for V566 Oph was computed from the elements of Dawson and Narayanaswamy (1977) while the O-C for VW Cep was computed using the elements of Cristescu (1978).

Table I

Star	HJD 2440000 +	$\sigma$	O-C	Filter	Rem.
V566 Oph	3676.4026	$\pm 0.0003$	+0.0084	B,V	
V566 Oph	3677.4272	$\pm 0.0004$	+0.0089	B,V	Min II
VW Cep	3678.5786	$\pm 0.0006$	+0.0045	B,V	Min II
VW Cep	3679.5510	$\pm 0.0002$	+0.0028	B,V	
VW Cep	3680.6646	$\pm 0.0003$	+0.0032	B,V
