**PHOTOELECTRIC MINIMA OF
SOME ECCENTRIC ECLIPSING BINARY SYSTEMS**

BOZKURT, ZEYNEP

Ege University, Science Faculty, Department of Astronomy and Space Sciences, 35100, İzmir-Turkey;
e-mail: zeynep.bozkurt@ege.edu.tr

Observatory and telescope:

30-cm, 35-cm and 40-cm Meade and 48-cm Cassegrain telescopes at Ege University Observatory Research and Application Center.

Detector:	SSP-5 photoelectric photometer attached to 30 and 35-cm telescopes, high-speed three-channel Vilnius photometer attached to 48-cm telescope and Apogee 2048x2048 CCD camera attached to 40-cm telescope.
------------------	--

Method of data reduction:

Reduced differential magnitudes, in the sense of variable minus comparison, were obtained using the procedures outlined in Hardie (1962).

Method of minimum determination:

The minima times were calculated using the method of Kwee & van Woerden (1956).

Times of minima:					
Star name	Time of min. HJD 2400000+	Error	Type	Filter	Rem.

Remarks:

Detectors which were used to observe the related minima times.

Acknowledgements:

The author acknowledges allotment of observing time at Ege University Observatory Research and Application Center.
